

2014+ Chevrolet Corvette

Power Outlet Tray Switch Panel

Part # 00-11035

INSTALLATION INSTRUCTIONS

These installation instructions will guide you through the steps necessary to install this switch panel in your 2014+ Chevrolet Corvette. This switch panel is designed to replace the factory power outlet in the center console.

Tools Needed For Installation:

- T-15 Torx Bit
- T-20 Torx Bit
- Trim Tool

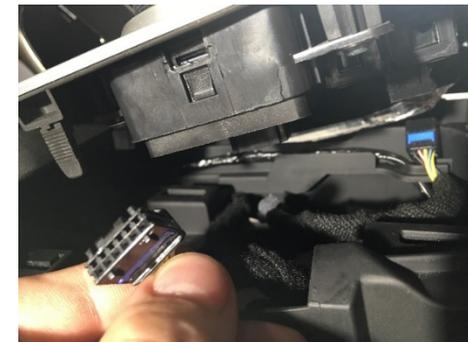

Step 1:

Using the trim tool, remove the plastic and leather trim from the console and under the dash on the drivers side. Then, using the T-15 Torx bit remove the 3 bolts that secure the center console.

Step 2:

Put your ignition in accessory mode, and place the shifter in the neutral position. Using the trim tool, pop the center console up. Once the console is loose, disconnect the 3 wiring connectors inside it.

Step 3:

After disconnecting the wiring, firmly grip the shifter and pull up with slight force. The center console should then come loose, allowing it to be removed from the vehicle. Place the vehicle back park and turn the ignition off.

Step 4:

Take the console to a clean work area. On the bottom of the console, you will need to remove the six T-20 bolts that secure the 12V Power Assembly. Then, remove the 2 T-20 bolts that are on each side of the power assembly. At this point, the power assembly should come free.

INSTALLATION INSTRUCTIONS

Step 5:

Remove the power assembly and insert the switch panel in place of power assembly. Use the 2 T-20 bolts to secure the switch panel into the power assembly bracket. Place the switch panel assembly into the console, making sure the switch panel is centered in the opening on top.

Step 6:

After your switch panel has been properly wired using the wiring diagram below, you can begin reassembly. Be careful not to damage the trim fasteners when replacing the console.

Tips From The Pro's

When wiring your switch panel, double check all of your wiring connections. For a clean, professional install we recommend using heat shrink of all crimped connectors. This will protect the connection, and make the connection stronger between the wire and crimp-on connector.

If you have any questions regarding the installation or operation of your Nitrous Outlet Switch Panel please call the Nitrous Outlet Tech Support Line at (254) 848-4300 or (866) 648-7637. We are available to answer your questions or concerns Monday-Friday, 8:30am-5:30pm CST.
