

5th Gen Camaro Fuel Line

5th Gen Camaro Fuel Feed Crossover Line

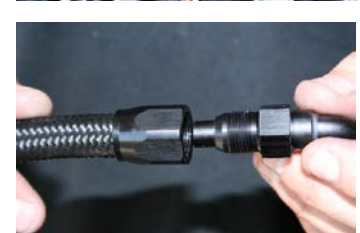

Part #00-22000

INSTALLATION INSTRUCTIONS

The 5th gen is a must have for the 2010 to current Camaro. This fuel line kit is designed to replace the restrictive factory fuel line located at the passenger side frame rail to the intakes fuel rail that feeds from the hard line and prevent large lean spikes. Without this kit the car will have a huge fuel pressure drop when the nitrous system engages.

INSTALLATION

1. Relieve residual pressure in the fuel system. This can be accomplished by removing the gas cap and releasing line pressure at the Schrader valve with a screwdriver.
2. Using a fuel line disconnect tool remove the factory line from the fuel rail and the hard line coming from the fuel tank on the passenger side of the engine bay.
3. Using a 10mm socket remove the nut holding the center support from the intake manifold.
4. Attach the 2 supplied adaptors to the fuel rail and hard lines.
5. Cut the 6AN hose to length and attach the two supplied 6AN 90* fittings to the hose.
6. Install the supplied wire loom around the braided hose to protect it from abrasion.
7. Carefully route the hose behind the engine and attach at both ends.
8. Have a helper turn the key in to the on position, wait 10 sec, then turn key off. Repeat this procedure twice to ensure the fuel rails are primed and at operating pressure.
9. Turn the key in to the on position once again and do a visual inspection to check for leaks. If there are no leaks you are good to go!
